Your source for important information and specials in the Touch-Up Industry!

Volume One Issue 6 January/February 2005 Published by DFP Inc. ©2005

Welcome back! Happy New Year! If you would like to be able to do some on-site finishing or maybe you need to do some in-house finishing but you don't want to invest in a spray booth, this month's feature product is for you!

Did you know that FUJI HVLP Spray Systems can reduce overspray by up to 80%? They also comply with the strictest environmental protection regulations.

This high volume, low pressure turbine is a powered spray system that provides the quality of finish identical to

the best high pressure systems without the need of a compressor. The turbine produces a continuous supply of warm air eliminating moisture and oil contamination that plagues high-pressure systems. The fingertip spray pattern control adjusts from 14" vertical pattern to 1/4" pound pattern. The fluid adjusting screws reduce quantity of paint material for airbrush applications.

This system is compact and can be easily taken to the job site. For more information please check page 25 of our catalog.

PRODUCT OF THE MONTH: Fuji Turbine Spray Systems

Q-Series™
'Quiet' Turbines.
Noise is reduced by
more than 50%

Save 10%
